(Please meet with a college counselor)
- English 101 College Reading and Composition I
- Completion of all General Education Requirements for an Associate Degree by the end of the spring semester of the application year.

Fall 2020 LACC Radiologic Technology Program
Selection Process and all Subsequent Years

Students are required to submit an online application to the LACC RT department during the application period: February 1 to March 31 of each year. The steps to apply will be posted on the [RT Program website](#) in January of each year.

Students are selected for entry into the Radiologic Technology Program via a waiting list. The order of the waiting list is based off a true lottery process. The true lottery process occurs once the student's application is reviewed and it is determined the students meet all of the prerequisites requirements.

The students are also required to submit official transcripts to verify they have completed all of the RT prerequisites and general education courses including the coursework completed at Los Angeles City College.

Qualified applicants will receive a status letter indicating their wait list number. Each year the students are required to re-apply to maintain their standing on the waiting list.
